Cat 2 – up to 12.4 (6 – 12)

Cat 3 – up to 20.4 (13 – 20)

Cat 4 – up to 28.4 (21 – 28)

Cat 5 – up to 36 (29 – 36)

Silverware Medal Strokeplay events.

It has been general practice at least over the last two seasons that for silverware strokeplay events players are drawn in handicap order.

When it is a medal strokeplay silverware competition then category 1 and category 2 players are pooled together and a random draw can be made from these entries. This would be for the unnamed silverware.

Category 3 players have a random draw

Category 4 and 5 players are pooled together and have a random draw.

The medal strokeplay event where players play in handicap order is the 1st round of the Club championship and for the Champion of Champions events.

When the competition is a Silverware Stableford Named Competition (ie Jeremy Potter) then the split for divisions of handicap should be within the range of 18 - 20, therefore all players under the range 18-20 handicap go into a random draw (Division 1) and all players over 18-20 (Division 2) go into a random draw. The range is given to try and average out the numbers between the two divisions to as equal number of players as possible. This can only be determined on the day of play.

Stableford or other Medal Qualifiers

The aim is to try and get as many 3 ball groups as possible and keep 4 ball groups to a minimum to try and speed up play plus to create a mixture of playing handicaps in each 3 ball group.

This is the main element of qualifying competitions within the Seniors Group including the first five rounds of the Winter League.

For these Roll Up events then the draw for making a group will be as follows.

The players will be split into 3 groups at entry using their card and handicaps.

The first group will be for the lower 1/3 (third) of players and may require to be up to handicap 15,16 or more depending on the entries.

The second group will be from the next handicap above the first group up to say 22,23

The third group will be from 23/24 upwards.

Cont'd

The intention is to try and get three equal groups of players within the handicap bands.

The draw for each group is then made randomly with a card taken from each pile, lower, middle and high to form the three ball of players.

This allows a fairly random selection but also caters for putting lower players with high players and maintaining a good mix of player and therefore maintaining a good social mix on the handicapping.

Final round 6 of Winter League

This is a pre- drawn competition with the WL leaders going out last.

Therefore the draw is made prior to the roll up date and players are drawn in the reverse order based on there position within the league until the leaders are drawn out to play last.

NON qualifying Roll Ups

Non Qualifying single strokeplay events medal or stableford.

This is primarily through the winter season when there is not any Qualifiers being held by the seniors group.

Have a totally random draw.

Team competitions including pairs

Pairs

Cards are split based on handicap into Division 1 and division 2 and a card drawn randomly from each section to form the pair.

Team of three or four players

Card entries are split as equal as possible into three or four groups by handicap and drawn randomly from each pile to form a team.
